## OZMOSIS REQUEST THREAD / Ozmosis Anfragen [1. Beitrag beachten!]

Beitrag von „vcrman“ vom 15. Juli 2020, 20:44

Hello all! I have been running Bios for Sierra from Griven but now would like to upgrade. Any help is appreciated! (I am using DP 1.1 out on HD4000 from 3475s if those details help)

1. Hersteller: Gigabyte
2. Modell: GA-B75-TN Rev. 1.1
3. Chipsatz: B75
4. [Bios Version](#): F2
5. Bios Link: [https://download.gigabyte.com/FileList/BIOS/mb\\_bios\\_ga-b75tn\\_f2.exe](https://download.gigabyte.com/FileList/BIOS/mb_bios_ga-b75tn_f2.exe)
6. macOS Mojave

Note: there are two files apparently in the package but only B75TN\_8M.F2 appears to be used.
