

# [Sammelthread] MacOS BigSur 11.0 DEV-Beta Erfahrungen

Beitrag von „Macko“ vom 16. Juli 2020, 20:01

Hi [Si Vis Pacem](#), I see you have a Gigabyte base. board. I waited a long time for EFI to be able to do a clean installation from USB. What is your EFI for a clean installation?

I enclose mine. Everything works except WIFI, brightness and sound control. But I replaced that with MonitorControl.

System startup on NVME is slower than on Catalina, but it's Beta2. Fingers crossed 🍀🍀🍀
