# Gigabyte GA-Z77X-UD3H/DSMT/KEXTE und mehr

Beitrag von „al6042“ vom 18. Juli 2020, 13:59

This MacIASL-DSMT-Patch is currently only available for the DSMT directly and should be part of the aforementioned patched DSMT for the board.

Do you have any USB-Devices in addition to keyboard and mouse running?

Then this might be the culprit, like mentioned in [https://www.reddit.com/r/hackintosh/](https://www.reddit.com/r/hackintosh)
