MSR Unlock/Cascade Lake Refresh Firmware Fix

Beitrag von „Extreme" vom 19. Juli 2020, 08:20

I mean sleep.

Yes, i did the falshback procedure as described by you and i used the modified firmware that you have attached in the tutorial related to Sage.

As soon as i can i will try to redo the procedure: even if i read that even some other user sleep does not work with the modified 3101.
