El Capitan auf dem T61? Ja aber sicher doch!

Beitrag von „kay2wild“ vom 23. Juli 2020, 07:47

[Zitat von MacPeet](#)

Catalina on the T61 / T61p with Nvidia? YES, BUT SURE!

Today in the heat, the Catalina install was still on the T61p, in front of the fan.

SMBIOS is still MacBookPro5,1

Clover4957 Legacy BiosBlock installed

Install Catalina with Dosdude stick and booted back into the stick after the two-stage install and carried out the non-metal graphic patch.

The Dosdude Postinstaller carries out the patches for Atheros etc. in the background, you don't notice or see anything.

Then the first start in the system and everything went well.

LAN, WLAN, SD card, audio with AppleALC, BT, ...

HS, Mojave and Catalina are all installed on an SSD. HS still in HFS +, Mojave and Catalina with APFS.

[attach = '107452', 'none', 'true'] [/ attach]

... and even the old box can:

[attach = '107453', 'none', 'true'] [/ attach]

If someone with an Nvidia graphic is interested, here is the absolutely working Clover folder:

[attach = '107454'] [/attach]

Serial is of course deleted and has to be adjusted.

Hey For whatever reasons I'm having trouble installing Catalina on my T61. Im using the latest clover r5120, copied over [MacPeet](#) Clover flies, clicked generate to generate my own serial, saved it, plugged it up, but no go.
