[Zitat von g-force](#)

MacPeet`s Clover was created with an older version of Clover, it has a different structure. If you mess it with Clover 5120 it won`t regocnize the drivers-folder.

Use MacPeet`s Clover without updating to 5120.

How would I do that without using the latest clover? Cant I just use the latest clover and copy over MacPeet files into the appropriate folders(which I've tried; didnt work)
