[Zitat von steff89](#)

Hey, with the basis of [user = '3145'] the hack fan [/ user] I now have a stable installation in which sleep / wake is running. Enclosed my current EFI folder based on OpenCore ndk 0.56.

Hey @ [steff89](#) first of all i must thank to you because with this EFI i am now using OC other wise i was using clover

i downloaded your EFI and used in my on system and everything is working fine but some graphic issue when i boot i see login screen icons are too big and when i login i see black wallpaper and It took some seconds to see colors and i see some graphics glitches also

above is my geekbench mark is this fine or some issue

Tank you
