

OpenCore EFI Maker

Beitrag von „schmalen“ vom 1. August 2020, 09:58

Funktioniert eigentlich der "Maker" in Big Sur? Bei mir kommt ne Meldung das es Xcode nicht findet, obwohl installiert

```
OpenCore EFI Maker (1.0.0)
What do you want to do next?
(1) Use OpenCore 0.8.0, iL2u and plugins stable version.
(2) Building and use beta version of OpenCore 0.8.0.
(3) Building and use beta version of OpenCore 0.8.0.1, iL2u and plugins.
(4) Exit
Please select a number: 1
This function requires internet.
(1) Enable
(2) Download iL2u tools
(3) None
(4) Refresh
(5) Cancel
(6) Check now
You should be taken from macutils.plist by system.
Please sign in, sign out, or you want to continue.
sign in sign out
Enable and Refresh, aborting
Refreshing macutils...
...checking system status...
...checking hardware...
...comparing hardware files...
...completion...
(Process Interrupt)
```
