

macOS Catalina zu Big Sur Update funktioniert nicht

Beitrag von „karacho“ vom 5. August 2020, 13:36

Im letzten Bild steht...

Found update container but did not find update volume

Von welcher Version von Catalina möchtest du updaten?

[https://developer.apple.com/do...ur-11-beta-release-notes/](https://developer.apple.com/documentation/macos-big-sur-11-beta-release-notes/)

Known Issues

- You might be unable to update macOS Big Sur 11 beta 4, if Secure Boot is set to No Security. (63434409)
- When updating to macOS Big Sur 11 beta 3 or later, you might be offered an unexpectedly large download rather than an incremental software update. (65753086)
Workaround: Under the "Another update is available" text, click the "More info..." link. This will reveal the incremental update where you can click the Install Now button.
- You might need to adjust Energy Saver settings so your Mac doesn't go to sleep while preparing to install macOS Big Sur 11 beta. (63166401)
- APFS containers with non-default allocation block sizes aren't currently supported for installation. (64312561)
- If macOS Big Sur 11 beta is installed into the same APFS container as previous versions of macOS Catalina 10.15, system software updates can no longer be installed on the previous versions of macOS. (64411484)
Workaround: Update the previous version of macOS Catalina to 10.15.6.
