El Capitan auf dem T61? Ja aber sicher doch!

Beitrag von „kay2wild“ vom 6. August 2020, 07:24

[Zitat von g-force](#)

The ++++ signs present the loss of contact to the USB during the installation process.
Did you try other USB ports?

What's the meaning of "Disk Creator" - what did you do?

~~I used "Install Disk Creator" from macdaddy.io to build my bootable.~~

Update:

~~In the process of installing Yosemite instead of High Sierra as we speak. Also used the "createinstallmedia" command in terminal instead of using Disk Creator (dont know if that made a difference but ...)~~

Thanks for all your help gentlemen.

Successfully installed El Capitan.

Using SmbIOS:

MacBookPro5,1 - Lets me install MacOS as high as El Capitan

MacBookPro7,1 - Lets me install MacOS as high as High Sierra
