(Anleitung) Monterey & Big Sur auf Dell Latitude e5450/e7450/e7250/e5250/e5550 + Touchscreen + OpenCore + 100% Tastaturbelegung

Beitrag von „MrThankful“ vom 15. August 2020, 05:19

[Retch](#) I installed Catalina 10.15.2 on a Dell Latitude E5450 today using the settings you attached (in addition to minor adjustments). I replaced my wireless card with a dw1707 and the wi-fi is working fine. The only things that aren't working are: bluetooth (I haven't been interested in fixing it yet), the external monitor connected via HDMI (works for a few seconds, but then the video hangs) and vga (doesn't show anything). At startup, some messages pop up quickly, like 'ocs: no schema for delete at 0 index' and stuff, but the system boots up. My sincere thanks. 🙌😊🙌

CPU : Intel Core i5 (5ª geração) 5300U / 2,3 Ghz

Memória : 8 GB (2x 4 GB)

HD : SSD 240 GB

Wireless / BT : DW1707

Versão do BIOS : A13
