

# Hackintosh für Logic Pro X und Catalina

Beitrag von „ITzTravellnTime“ vom 19. August 2020, 03:57

[Zitat von Basti Wolf](#)

Das ist prima 😊 dann kannst du dir mit tinu einen Bootstick für catalina erstellen.

TINU officially supports that and Big Sur with the latest BETA release you can find here:  
<https://github.com/ITzTravellnTime/TINU/releases>

It turns out that the problem was the app not having the needed permissions with [SIP](#) enabled so the solution is running TINU from the terminal which has all the needed permissions, but this is still experimental and the way it works will change.
