

OpenCore Sammelthread BootPicker OpenCanopy. (Vorher Sammelthread N-D-K Erweiterung NdkBootPicker was leider Entwicklungsseitig eingestellt wurde)

Beitrag von „Bob-Schmu“ vom 30. August 2020, 17:33

Nennt sich HideAuxiliary in der config.

```
3. HideAuxiliary
Type: plist boolean
Fallback: false
Description: Hides auxiliary entries from picker menu by default.
An entry is considered auxiliary when at least one of the following applies:

- Entry is macOS recovery.
- Entry is macOS Time Machine.
- Entry is explicitly marked as Auxiliary.
- Entry is system (e.g. Reset FIRMWARE).

To see all entries picker menu needs to be reloaded in extended mode by pressing Spacebar key. Hiding auxiliary entries may increase boot performance for multiboot systems.
```
