

[Sammelthread] MacOS BigSur 11.0 DEV-Beta Erfahrungen

Beitrag von „Macko“ vom 3. September 2020, 21:00

Installation beta 6 approx. 20-25 min on SSD. After installation, the system startup is slow, night mode cannot be changed to day mode.

Slow application opening and freezing - no disaster. Not better but worse!

It annoys me on the Mac that new updates must be searched for after each update. I'm giving a downgrade !!
