

MacOS Catalina als dualboot | Ist meine Hardware mit macOS kompatibel?

Beitrag von „5T33Z0“ vom 11. September 2020, 00:23

[ITzTravellnTime](#) I am pretty sure, the principle for creating the USB drive is pretty much the same - beta or not. Otherwise, if you don't think this tutorial is suitable, maybe should consider creating your own as a reference guide - since it's your software anyway. I don't know what you consider a tutorial, but for me this is pretty much what a tutorial does, tbh.
