

hieplpvip AsusSMC (für ASUS Laptops)

Beitrag von „anonymous_writer“ vom 19. September 2020, 19:52

v1.4.0

- Rework keyboard backlight mechanism. Users need to repatch DSDT. More specific, the line `^^KBLV = Arg0 / 16` must be removed
- Rework ambient light sensor mechanism (use WMI for toggling sensor; read value directly with method `_ALI`). DSDT patch is not needed anymore.
- Add experimental support for reading fan speed with WMI
- Support battery charge threshold found on new laptops (charging stops at 80%). Can be disabled by turning off Battery Health in Energy Saver

Mein Laptop läuft damit wie eine Original MacBook. Top Arbeit von dem [Entwickler](#)
