TINU error code

Beitrag von „ITzTravelInTime" vom 22. September 2020, 21:43

About the error: it was caused by a failure to perform an apple script to give the executable permition to a script file which then tinu opens with the terminal to use diagnostics mode. again this has been fixed with the new upcomping release, which will make the diagnostics mode mandatory only for catalina (or newer versions) users with SIP enabled

EDIT to have the new BETA PM me on telegram using the same nickname i use in the forum
