

MSI MEG Z490I UNIFY als Hackintosh

Beitrag von „malibio“ vom 26. September 2020, 03:45

Hi there, I'm sorry to write in English. My German isn't good enough and being in Berlin doesn't really enforce me to learn :-/

Anyway, I was wondering if you got far with this build. I'm just about convinced this is the board I'm going to purchase. I can be patient about the WiFi and wait for a more mature workaround. I just want to make sure I can use my Bluetooth.

Any tips or updates from your journey is greatly appreciated.
