

# MSI MEG Z490I UNIFY als Hackintosh

Beitrag von „DSM2“ vom 26. September 2020, 07:52

Mature workaround?

There is none! If you want full Apple Wifi/Bluetooth features, the only way to gain them, is to use an adapter for the M2 NVMe Slots on the motherboard.

The NGFFm2 Slot can only be used with an CNVi Card on this particular motherboard.
