

[SOLVED] OpenCore build - Ryzen 3900x - Asus Tuf X570 plus wifi

Beitrag von „Heiko77“ vom 27. September 2020, 21:49

So, begin from scratch using dortonia guide. Be sure you're installing and booting high Sierra. You should use the GTX960. If system is running, try fixing drivers. So I got a working system with high sierra and gtx980. I followed this guide and after it I fixed graphics: <https://youtu.be/QtvDRDqgolc>

maybe this will help you.

I can remember that I've to install drivers and set boot argument.
