

# [SOLVED] OpenCore build - Ryzen 3900x - Asus Tuf X570 plus wifi

Beitrag von „Raptortosh“ vom 27. September 2020, 21:51

Have you tried another smbios? Try iMacPro1.1

As gpu, you should Use the GTX960 (yes, it only runs until 10.13.6, but your others also are running until 10.13.6 or even Older.). Also the 960 is the fastest of yours.
