## **TINU und Mountain Lion nicht kompatibel?**

**Beitrag von „ITzTravellnTime“ vom 28. September 2020, 03:47**

TINU works just with OS X Mavericks and newer installer apps as stated in the requirements screen when you open the app, TINU needs the createinstallmedia executable which has been introduced just since OS X Mavericks inside installer apps.

Also for any question about TINU feel free to tag me, i am the developer of the app, i also have a FAQ page on github about the app: <https://github.com/ITzTravellnTime/TINU/wiki/FAQs>

There is also a new version coming so keep your eyes open for that.
