

Update auf Catalina 10.15.7 fehlgeschlagen

Beitrag von „hackmac004“ vom 3. Oktober 2020, 20:49

Okay, füge mal noch diese SSDT hinzu unter /EFI/OC/ACPI. In der config wird sie dann so eingetragen.

The screenshot shows a configuration tool interface with a tree view of an ACPI dictionary. The root node is 'ACPI' (Dictionary, 4 Schlüssel/Wert-Paare). It has four children: 'Add' (Array, 4 geordnete Elemente), '0' (Dictionary, 3 Schlüssel/Wert-Paare), '1' (Dictionary, 3 Schlüssel/Wert-Paare), and '2' (Dictionary, 3 Schlüssel/Wert-Paare). The '2' node is expanded to show three key-value pairs: 'Comment' (String, Read the comment in dsl sample), 'Enabled' (Boolean, YES), and 'Path' (String, SSDT-PMC.aml).

Node	Type	Value
ACPI	Dictionary	4 Schlüssel/Wert-Paare
Add	Array	4 geordnete Elemente
0	Dictionary	3 Schlüssel/Wert-Paare
1	Dictionary	3 Schlüssel/Wert-Paare
2	Dictionary	3 Schlüssel/Wert-Paare
Comment	String	Read the comment in dsl sample
Enabled	Boolean	YES
Path	String	SSDT-PMC.aml

Edit: [NekeO](#) Kommst du in den recovery modus?
