

hieplvip AsusSMC (für ASUS Laptops)

Beitrag von „anonymous_writer“ vom 6. Oktober 2020, 22:09

Version 1.4.1

- Added MacKernelSDK with Xcode 12 compatibility
- Drop experimental custom fan control code
- Drop AsusHID as I couldn't make it work on Catalina and above. Please use ROG-HID by [@black-dragon74](#)
- Improving touchpad toggling mechanism

Läuft Top der neue Kext. Danke an den Entwickler.
