Ozmosis mit macOS Catalina 10.15 - OZ167X-XMAX (extended)

Beitrag von „Raptortosh“ vom 9. Oktober 2020, 22:41

Are you using the latest KernnextPatcher.plist?
[https://www.insanelymac.com/fo...ndComment&comment=2714169](https://www.insanelymac.com/forum/thread/43396-ozmosis-mit-macos-catalina-10-15-oz167x-xmax-extended/?postID=645118#comment=2714169)

This works until 10.15.7 for me.

Latest KernnextPatcher also Has internal Kernel Patches, Symbol based, like they were in OZ. Haven't tested that know, Look UEFTW Github:
<https://github.com/cecekpawon/...33e0556b2ddee080a6a8b43bd>

Or newer one: <https://github.com/cecekpawon/...4e707a7a227db2f6f9b5a8650>

This should work, i think.

Do you Use latest ACPIPatcher? For Catalina patches.

Fakesmc also works with Catalina, but you could also Use Virtualsmc.kext & Lilu.kext if you want.
