## Ozmosis mit macOS Catalina 10.15 - OZ167X-XMAX (extended)

Beitrag von „ammoune78“ vom 10. Oktober 2020, 14:59

Ah ok, the username change, didn't know it's you . I already know cecekpawon GitHub releases, and already used the old releases from 2018, with also 100 Series. But know there's much more changes, and I think I don't know what to enable from the plist file and what to disable I'm in the need of renamepatches and what to drope and patch. You can see my previous post from the log what renames I was attempting to do, then if you can make them in plist please and in ffs, can you do it?
