LENOVO T530 OpenCore

Since my T530 uses a different display panel than Sascha's (above), its config does not work with my notebook. So here is mine. The BIOS is patched to remove the whitelist and a Broadcom WLAN card is installed.

```

Model : Lenovo THINKPAD T530 2429-62G

OC Version : 0.6.3 Nightly from October 18, 2020

macOS : 10.15.7

SMBIOS : MacBookPro10,1 (use GenSMBIOS to generate your own MLB, System UUID and Serial!)

Bootstrap : yes

OpenCanopy : Yes

Chime : Yeah

VileVault : Optional

hardware

CPU : i7 3630QM (SSDT-PM available). If another CPU is used, generate your own SSDT-PM with ssdtPRGen.

GPU : Intel HD 4000, resolution: 1600x900 px

RAM : 16 GB

SSD : Samsung 840 Evo 250

WLAN / Bluetooth : Broadcom BCM43xx, 802.11 a / b / g / n / ac

The notebook can be used with a Lenovo dock. The image is looped through to the DVI and DP port on the dock so that an external monitor can be operated. However, the line-out on the laptop must still be used to connect external speakers.

Issues :

- Dual boot from a disk fails. Workaround: Start Windows Boot Manager via BIOS boot menu (F12)
- The boot stick must be connected to the USB2 port in order to start the computer from the stick.

Changes:

- Fixed framebuffer patch> External monitor via dock works
- VoodooPS2Keyboard, VoodooPS3Mouse and VoodooPS2Trackpad.kext removed> superfluous, as integrated in VoodooPS2Controller.kext
