

[Sammelthread] MacOS BigSur 11.0 DEV-Beta Erfahrungen

Beitrag von „Nightflyer“ vom 20. Oktober 2020, 02:33

hast du in deiner config unter Misc-Security den Eintrag SecureBootModel auf Disabled gesetzt?

A screenshot of a configuration menu with a dark background and light text. The menu is organized into a tree structure. The 'Security' section is expanded, showing various settings. A red arrow points to the 'SecureBootModel' entry, which is set to 'Disabled'.

Category	Setting Name	Type	Value
> Kernel		Dictionary	7 Schlüssel/Werte
√ Misc		Dictionary	6 Schlüssel/Werte
> BlessOverride		Array	0 geordnete Elemente
> Boot		Dictionary	10 Schlüssel/Werte
> Debug		Dictionary	8 Schlüssel/Werte
> Entries		Array	1 geordnete Elemente
√ Security		Dictionary	14 Schlüssel/Werte
	AllowNvramReset	Boolean	YES
	AllowSetDefault	Boolean	YES
	ApECID	Zahl	0
	AuthRestart	Boolean	NO
	BootProtect	String	Bootstrap
	DmgLoading	String	Signed
	EnablePassword	Boolean	NO
