

Bootfehler OC ASRock B75M + Finetuning

Beitrag von „gllark“ vom 28. Oktober 2020, 20:56

Du hast immer noch keine Einträge unter DeviceProperties. M.E. brauchst du mindestens das auf dem Bild.

The image shows a screenshot of a system information tool, likely iStat Meno, displaying the configuration for DeviceProperties. The configuration is organized into a tree structure with expandable sections. The 'DeviceProperties' section is expanded, showing a 'Add' section which is also expanded. Under 'Add', there are two PCI root entries. The first entry is 'PciRoot(0x0)/Pci(0x16,0x0)' with a 'device-id' of '3A1C0000'. The second entry is 'PciRoot(0x0)/Pci(0x2,0x0)' with an 'AAPL,snb-platform-id' of '00000500' and a 'device-id' of '02010000'.

DeviceProperties	Dictionary	2 Schlüssel-Wert-Paare
Add	Dictionary	2 Schlüssel-Wert-Paare
PciRoot(0x0)/Pci(0x16,0x0)	Dictionary	1 Schlüssel-Wert-Paare
device-id	Daten	4 Bytes: 3A1C0000
PciRoot(0x0)/Pci(0x2,0x0)	Dictionary	2 Schlüssel-Wert-Paare
AAPL,snb-platform-id	Daten	4 Bytes: 00000500
device-id	Daten	4 Bytes: 02010000
