

[Sammelthread] MacOS BigSur 11.0 DEV-Beta Erfahrungen

Beitrag von „Macko“ vom 6. November 2020, 13:30

Hi, when I run OpenCore, it tells me I have an old version of the bootloader.

When I give the new version + my kext and drivers, I won't start the PC.

I'm putting my EFI here and please someone updating my bootloader on my Skylake desktop PC.

Thanks for help.
