

# HP EliteBook 840 G1 & OpenCore Catalina/Big Sur

Beitrag von „Zayed4502“ vom 11. November 2020, 20:03

I am in need of help again lol. I am having some trackpad issues where I can use the trackpad with ALL gestures except 4 finger ones because of the trackpad size BUT the buttons are not clickable. I used to use the [Voodoo PS2 from Rehabman](#) until very recently after learning about [acidanthera's Voodoo PS2](#) with support for trackpad gestures. My laptop has a trackpad, NOT CLICKABLE, and four buttons, 2 on the bottom, and 2 on the top. As the trackpad is not clickable, I cannot select something and drag it or anything that would require me to press and hold the button and then use the trackpad. When I used the PS2 directly from the acidanthera repo, I couldn't get the trackpad to work either, but I found [this repo which is a fork of the acidanthera repo](#) and its modified to work with synaptics, this allowed me to use the trackpad but still no buttons. I use an external mouse for now, but I would like the functionality of these buttons to be restored. I don't think I have put anything in my dsdt files. I couldn't get the trackpad to work earlier as well but thanks to this fork, I can get the trackpad to work, but not the buttons. I have set the force touch emulation to 0 did hoping would bring back the functions on of the buttons, but did not work out.

Im attaching my EFI: [OC\\_0.6.2.zip](#), It is running OpenCore 0.6.2. I am stripping my smbios ...
