HP EliteBook 840 G1 & OpenCore Catalina/Big Sur

Beitrag von „Zayed4502" vom 12. November 2020, 00:09

Alright guys, i updated to 0.6.3 successfully, and after that i thought abotu giving the smbus rmi and ps2 a test and i seem to have it working now, and my microphone only seems to work sometimes as well, but on some reboots, it dosent want to work. I am using applalc.kext

edit: I cant connect to any external drives. i tested the ports with both an iPhone and a samsung and finder picks up the iPhone and samsung dex and aft picks up the samsung and succesful read and write with them but if i plug in any usb storage drive, they dont seem to work. my wireless mouse/keyboard usb receiver works as well. network drives also work. so just the directly plugable usb drives.

diskutil on the terminal and the diskutility app dosent show them as well.
edit: I updated the kexts and i fixed the microphone and the lights show up on the external usbs but still not detected by macos on diskutil or fdisk
