

HP EliteBook 840 G1 & OpenCore Catalina/Big Sur

Beitrag von „Zayed4502“ vom 13. November 2020, 23:19

I edited the EFI to get it working for all 1600x900 screens as it is what i have xD. everything is working except that I am using VoodooHDA because i am having some issues with AppleALC and my 2013 slim dock, sometimes it uses the mic and sometimes it wants to use the microphone port on the dock's back. It is still there in the EFI folder and the config.plist, just disabled lol. Like Big Sur, AppleALC has the memory to store the settings on audio for the speaker and headphonejack, (eg. muted speakers and 70% volume on the headphones), but VoodooHDA seems to not do that. It has the itlwm.kext, passwords and ssids need to be added. Big thing: it works perfectly with Big Sur 11.0.1 Final. All issues have been tracked down and fixed other than the mic issue.
