

[GUIDE] Clover updaten (ab v5123) inkl. OpenRuntime und Quirks (UEFI only)

Beitrag von „GoodBye“ vom 17. November 2020, 14:29

Thanxs for the good Guide,

first Boot worked, had to reactivate Apple ID (make sure your Phone Number is in there) - Mail Account Passwords and some Software License based on GUID.

After a long time with Clover 5097,

i did 5126 on USB, but booting the old one after the New, i´ve got CPU 1,2 Ghz Max ?

Something weired i also got with OC 0.6.3, where the Boot Args stay Present.

So, if you Update, you have to go the Path til the Finish line, if on a HP 8300 PC.

Use of FakeSMC here, cause all the Sensors Working, including Grafic Power and Temp, as well as Fan Speed.

HWMonitorSMC2

BigSur Installer seems not to start through, but had no Time for that.....

The image shows a macOS Catalina system information window. At the top, it displays 'macOS Catalina' and 'Version 10.15.7'. Below this, it lists the hardware: 'Mac Pro', 'Prozessor 3,39 GHz Quad-Core Intel Core i5', 'Speicher 24 GB 1600 MHz DDR3', 'Startvolumen Catalina', and 'Grafikkarte Radeon Pro WX 4100 4 GB'. A circular icon on the left shows a landscape. Below the main window, a detailed view of the 'Radeon Pro WX 4100' GPU is shown, listing various performance metrics.
