

# HP EliteBook 840 G1 & OpenCore Catalina/Big Sur

Beitrag von „Portosto“ vom 19. November 2020, 01:02

Hi there,

thanks for putting together the infos on this thread and for the time you invest to help others.

I'm new to this and I would like to install BigSur on HP G1 840, with the following specs:

CPU: Intel(R) Core(TM) i5-4300U CPU @ 1.90GHz 2.50 GHz

RAM: 16,0 GB (15,9 GB usable)

Video Card: Intel(R) HD Graphics Family

HDD: SAMSUNG MZ7TE128HMGR-000H1 - 119,24 GB

Wifi Card: Intel(R) Dual Band Wireless-N 7260

I have two partitions and I would like to install OSX on one of them and keep Windows on the other. If OSX will work ideally, I'll remove Windows. At the moment I only have Windows and I have no friends with a MAC computer. Can some of you point me to the tutorial to install the most up-to-date supported version, which I understand is Big Sur? I understand that a USB needs to be created, but how?

A few beers are guaranteed in Berlin for those who help 😊

Thanks a mill!
