

[Sammelthread] MacOS BigSur 11.0 DEV-Beta Erfahrungen

Beitrag von „bananaskin“ vom 23. November 2020, 13:23

Yes, you can have bootable backups on macOS Big Sur

by Mike | November 3, 2020

Update Nov 11: Apple addressed some of the APFS replication issues in the Big Sur 11.0.1 update, and CCC 5.1.23-51 includes support for making bootable backups on Big Sur. This build is also a Universal Binary, so it will run natively on M1 Macs. Obviously we aren't sure if it will make a bootable backup of an M1 Mac yet, but we'll be sorting that out over the next few weeks during the CCC 5.1.23 beta cycle. To access the beta, go to CCC's Preferences > Software Update and check the box to be informed of beta releases, then click the button to check for updates. Please note that this does not change our advice on waiting for the upgrade, we think it's best practice to wait for some OS updates to come along before applying a major OS upgrade to a production Mac.

EDIT: und ich habe gerade mal einen Test gemacht.....klappt wunderbar... 👍
