

# OC DELL Latitude E6420

Beitrag von „Mo-6420“ vom 3. Dezember 2020, 19:20

I used EFI CLOVER for my macOS catalina untill the version 51r22 after that i have many problems with it and the install of macOS Big Sur too of curse.

So i change into OC (OpenCore) it's easy, simple and with no problems.

I have one suggestion don't put the folder in the EFI partition of you hard disk. Just creat a new partition (MS DOS (Fat32) and put OC Folder in it...

You have also the choice between Apple or normal boot (config or config1) and Dos or Diagnostic Boot (config2).

i have some pic.

Good luck

And Enjoy!!!
