

Thinkpad Yoga S1

Beitrag von „griven“ vom 11. Dezember 2020, 15:03

This has to be done on your own with dumps from your actual bios. Some ROM values are unique to every Machine (eg. HardwareID, SLIP Tables and so on) and should not be interchanged. Using a ROM from the Web or from another person is a bad idea. The process of whitelist removal itself is described by [Sascha_77](#) in this thread: [BIOS Mod \(WWAN Whitelist\) mit wenigen Schritten selbstgemacht](#) if you feel uncomfortable with it or don't understand how to do it feel free to ask or send me your dumps via PN and I'll remove the whitelist for you.
