

Thinkpad Yoga S1

Beitrag von „griven“ vom 13. Dezember 2020, 20:08

No Problem 😊

If you can live with the limitations ITLWM has and don't mind the lack of features then ITLWM is the way to go. If ITLWM had been available when I got my S1 I'll probably would use it as well but as I wrote before it wasn't an option in the past. Given that ITLWM is still under active development chances are good that existing limitations may be solved in the future 😊
