

**In Arbeit**

# Big Sur läuft mit OC 0.6.4 auf T440 aber der Lüfter kommt nicht zur Ruhe

Beitrag von „EdD1024“ vom 16. Dezember 2020, 22:20

1.

7. DmgLoading

**Type:** plist string

**Failsafe:** Signed

**Description:** Define Disk Image (DMG) loading policy used for macOS Recovery.

Valid values:

- Disabled — loading DMG images will fail. Disabled policy will still let macOS Recovery to load in most cases as there usually are boot.efi files compatible with Apple Secure Boot. Manually downloaded DMG images stored in com.apple.recovery.boot directories will not load, however.
- Signed — only Apple-signed DMG images will load. Due to Apple Secure Boot design Signed policy will let any Apple-signed macOS Recovery to load regardless of Apple Secure Boot state, which may not always be desired.
- Any — any DMG images will mount as normal filesystems. Any policy is strongly not recommended and will cause a boot failure when Apple Secure Boot is activated.

Lass' es auf Signed, wenn es damit geht.
