

# OpenCore Sammelthread (Hilfe und Diskussion)

**Beitrag von „firefly\_can\_fly“ vom 17. Dezember 2020, 11:59**

Hi, after installing OS with OC as bootloader power management of CPU doesn't properly working, and overall OS's activity feels clunky (long load of features after OS load).

Can someone take a look and give some guidance about what to do?

EFI and IOreg attached
