jboeren I revert back to Windows because my freelancing work was disturbing due to no internet in laptop.

any way to use this enternet or wifi card? I'm not sure my card is supported or not.

Wifi card: BCM943228HMB

Enternet Card: Intel(R) Ethernet Connection I218-LM

Plug in an Intel wifi Card and use the Intel Kexts. Your Wifi Card Needs vendor-id entries in airportbrcmfixup.kext and a patch in opencore config to work properly.

here are the patches Not converted for opencore.

and the patched airportfixup.kext.

Maybe i can adjust the EFI for you After Christinas.
