[fabiosun](#)

At the moment just with luck.

I saw at mindfactory a Gigabyte 6900XT for 1050eur approx two weeks ago.

If you want it now and with customs fee i guess thats a good price for this card, despite the fact its' a lot of cash for a consumer GPU.

Thats' what [kaneske](#) meant i assume.

6900 is an enthusiast card and for the in comparison small extra performance over the 6800XT you pay.

Where did you get it?

Keep us updated as soon it arrives. Have fun! 😊
