Hell yeah, its' insane when looking on ebay.

For a 6900 tuf card it is good, plus the Amazon support/shipping handling.

I was desperate looking for a card at Mrsp. I had luck one week before christmas to get a 3080FE for 699eur.

Now i will wait that the 6800XT prices go down and hope for some luck again to get my hands on an AMD reference modell.

At least i can be patient a bit, since there isn't any MacOS Support yet, but it would be nice if its' coming soon.
