[kexterhack](#)

I think 3080FE is the best card for money if it is @MSRP..but I would like to continue to have an hack without using a dual GPU

In the past I have also in my rig a dual GPU like TitanZ (2+2 gpu)

But I prefer now to have a "monster" GPU to use in my task (DCP editing and SFX)

I hope in fast support for Big Navi in OSX also...cross finger 😊
