Ein Patch für das Vorschau Problem in Mojave

Beitrag von „anonymous_writer“ vom 30. Dezember 2020, 18:21

Wobei veraltet auch schon viel sagt.

```
• Added driver support for onboard LSPCON chips to enable DisplayPort to HDMI 2.0 output on Intel iGPUs B

v1.2.9
• Added AMD Radeon VII to detected list
• Disabled automatic framebuffer usage on Polaris GPUs
• Added 'preserve-names' device property to preserve current GPU names
• Added 'appleVR' patching support, replaces 'nvVGA' text (thx CMMChris and uglyJoe)

v.1.2.8
• Added KBL graphics kernel panic workaround on 10.14.4+
• Added GPU DPCD link incorporation into patch (thanks @0xFlaxWulf)
```
