Ozmosis mit macOS Catalina 10.15 - OZ167X-XMAX (extended)

Beitrag von „Pelikan213“ vom 30. Dezember 2020, 19:56

Thanks!

Btw can I ask about kexts-in-bios here?

1. ApfsDriverLoader Version 2.0.7 from first post work ok with 10.15.7? No need to update?

2. Better to use latest VirtualSMC or FakeSMC with Catalina and OZ167X-XMAX(extended)? Or doesn't matter?

3. What audio kext can You recommend for catalina with Gigabyte z97xGaming7, codec Realtek ALC 1150, and Gigabyte Radeon Vega56?

I thought of VoodooHDA2.9.2.kext convert to ffs and put in bios, but in that theme I cant ask if it will work for catalina10.15.7.... and AppleALC is very huge to put in bios.....
