

Ozmosis mit macOS Catalina 10.15 - OZ167X-XMAX (extended)

Beitrag von „Pelikan213“ vom 30. Dezember 2020, 21:40

1,2 - Thanks!

3. - I planned to put in EFI/OZ/Darwin/Extensions/Common WEG+lilu for GPU and IGPU with disable Intel and ATI Injection in Ozmdefault.plist. And put in bios USBinjectall, VirtualSMC, AtherosE2200Ethernet, and smthng small for audio... because I have 350kb of free space there even without deleting network bios.

I use now VoodooHDA inbios on z77 mobo and it works great. would like to use it again, but on this thread [VoodooHDA.kext](#) the last release works with H.Sierra and Mojave..... there is no for Catalina. Or if it works with Mojave it should work with Catalina?

<https://www.insanelymac.com/fo...21294-applealc-into-bios/>

Thanks for this link, I downloaded scripts for 1.0.19 and 1.1.1., will tried it.

And for AppleALC I need to add boot argument alcid = layout in OzmosisDefault

This is old versions of AppleALC but they should work with Catalina yes?
