

Big Sur Intel HD 4600

Beitrag von „Bob-Schmu“ vom 9. Januar 2021, 13:25

Die device-id allein bringt dir gar nichts.

The screenshot shows the Intel Driver Assistant interface. At the top, a table lists detected devices. Below that, there are sections for 'Später Add connectors', 'Active supported devices', and 'Recommended transfer rates'. A note at the bottom explains that for desktop PCs, the device ID is used to determine the transfer rate.

Device ID	Device Name	Device Type	Device Class	Device ID	Device Name	Device Type	Device Class	Device ID	Device Name	Device Type	Device Class
0x00000003	Intel HD Graphics 4600	GPU	Intel HD Graphics 4600	0x00000003	Intel HD Graphics 4600	GPU	Intel HD Graphics 4600	0x00000003	Intel HD Graphics 4600	GPU	Intel HD Graphics 4600

Später Add connectors

Active supported devices

- 0x00000003
- 0x00000003
- 0x00000003
- 0x00000003
- 0x00000003

Recommended transfer rates

- Desktop
 - 0x00000003 (Default)
- Laptop
 - 0x00000003 (Default)
 - 0x00000003 (Recommended)
 - 0x00000003 (Recommended)
- Empty Transfer Rate
 - 0x00000003 (Default)

For desktop PCs and mobile PCs (e.g., Intel HD Graphics 4600) use the device ID (0x00000003) for 30%.

Device ID	Device Name	Device Type	Device Class	Device ID	Device Name	Device Type	Device Class
0x00000003	Intel HD Graphics 4600	GPU	Intel HD Graphics 4600	0x00000003	Intel HD Graphics 4600	GPU	Intel HD Graphics 4600
