Wenn du noch den ROM-wert (Mac-Adresse) zu den oben genannten ergänzt, sollte es klappen.

The image shows a screenshot of the OpenCore.plist configuration file. It displays two sections: PlatformInfo and Generic. The PlatformInfo section contains Automatic (Boolean, YES) and CustomAutomatic (Boolean, NO). The Generic section contains various settings including AdviseWindows (Boolean, NO), SystemMemoryStatus (String, Auto), MLB (String, C02052), ProcessorType (Number, 0), ROM (Data, <B42E9), SpooFVendor (Boolean, YES), SystemProductName (String, iMac19), SystemSerialNumber (String, C02DW), SystemUUID (String, 9130D), UpdateDataHub (Boolean, YES), UpdateNVRAM (Boolean, YES), UpdateSMBIOS (Boolean, YES), and UpdateSMBIOSMode (String, Custom).

Key	Type	Value
PlatformInfo	Dictionary	7 items
Automatic	Boolean	YES
CustomAutomatic	Boolean	NO
Generic	Dictionary	9 items
AdviseWindows	Boolean	NO
SystemMemoryStatus	String	Auto
MLB	String	C02052
ProcessorType	Number	0
ROM	Data	<B42E9
SpooFVendor	Boolean	YES
SystemProductName	String	iMac19
SystemSerialNumber	String	C02DW
SystemUUID	String	9130D
UpdateDataHub	Boolean	YES
UpdateNVRAM	Boolean	YES
UpdateSMBIOS	Boolean	YES
UpdateSMBIOSMode	String	Custom
